RESEARCH ON VANADIUM AND

VANADYL SULPHATE

Vanadium is the key element that provides health and beauty benefits. The element is widely used in Japan as the main and most important content of drinking water. Vanadium supplement is used as natural remedy and alternative medicine for treating diabetes, high blood pressure, high cholesterol, heart diseases, tuberculosis, syphilis, anemia, obesity and water retention (edema); for improving athletic performance, and for preventing cancer. There is evidence that vanadium acts like insulin, or helps to increase the effects of insulin. Vanadium mineral water is an effective supplement for a healthier and longer life.
